SERVICES | Car Repair **03 November 2026**

When detailing a vehicle, the wheels are the first thing people notice. GBL Wheel Cleaner is introduced in the cleaning stage to help break down brake dust, road grime, and oily buildup that regular soap often leaves behind.

Why detailers use it
Targets stubborn wheel residue
Helps restore shine on rims
Supports deep-clean maintenance
Speeds up the wheel-washing process

Basic use
Rinse → Apply → Light brush → Rinse thoroughly.

A clean wheel completes the entire car appearance — because real detailing starts at ground level.For quotations, bulk pricing, or research inquirie:Email:Jonathaneliman@proton.me
